

DETERMINATION OF BUILDING HEIGHT IN FEET

This diagram is illustrative only
and is not part of the zoning
ordinance.

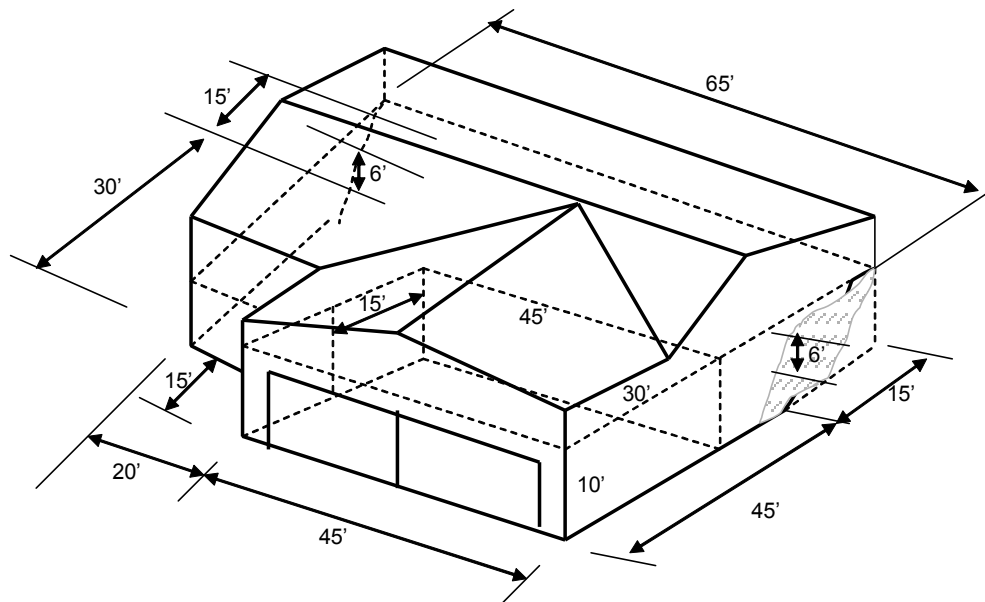

The floor above is not 6 feet above grade for more than 50 percent of the total perimeter.

Total perimeter $45 + 15 + 65 + 15 + 30 + 20 + 15 + 45 = 250$

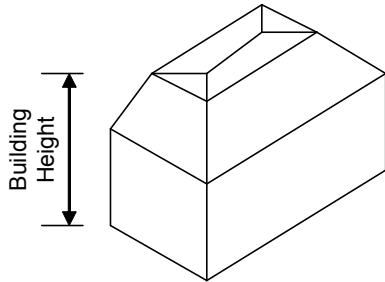

150 is more than $250/2$ or more than 125; therefore this is a story.

The adjacent elevation shall not include fill material.

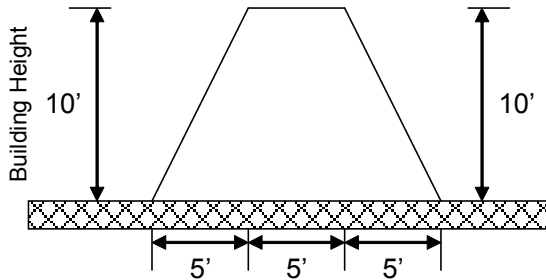

MANSARD ROOF

This diagram is illustrative only and is not part of the zoning ordinance.

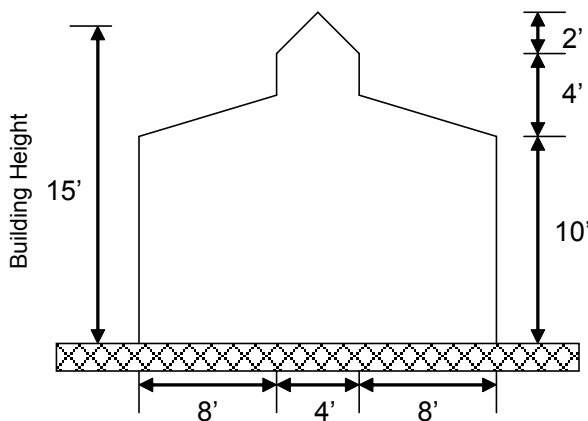

Mansard roofs are roofs with the top gable having a slope not greater than 1 in 12. Height of buildings with mansard roofs are measured from grade to deck line or bottom of the gable.

The roof-building boundary is not steeper than 1 horizontal to 2 vertical, therefore the entire structure is "roof" and with the top gable slope not greater than 1 in 12, the roof becomes mansard and the height is measured from the grade to the deck line.

MILL ROOF

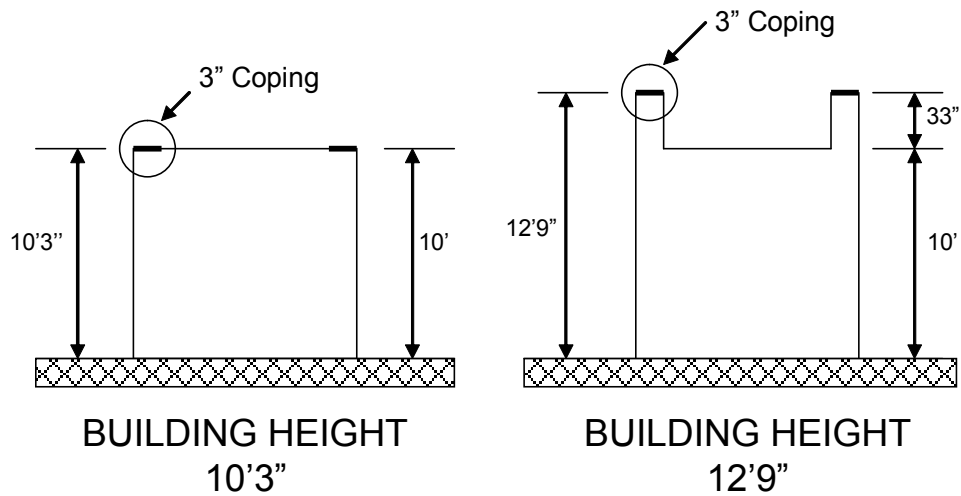

The height of the building is measured from grade to the average height of the highest gable.

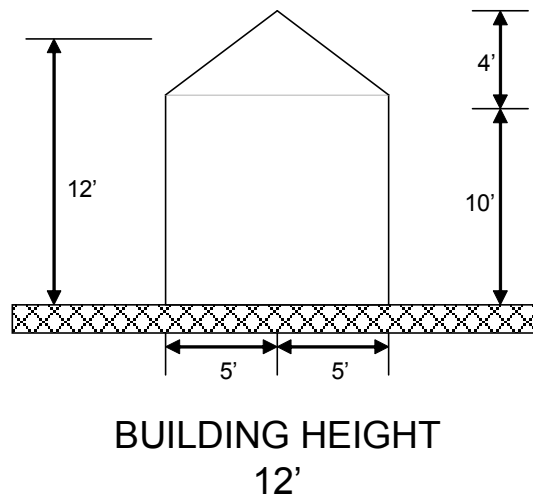

This diagram is illustrative only
and is not part of the zoning
ordinance.

“Height, Building”

Flat Roof: The height is measured from grade to the highest point of the coping.

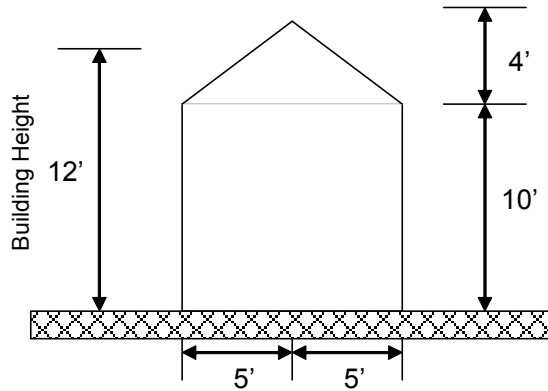

Gable Roof: The height is measured from grade to the average height of the roof.

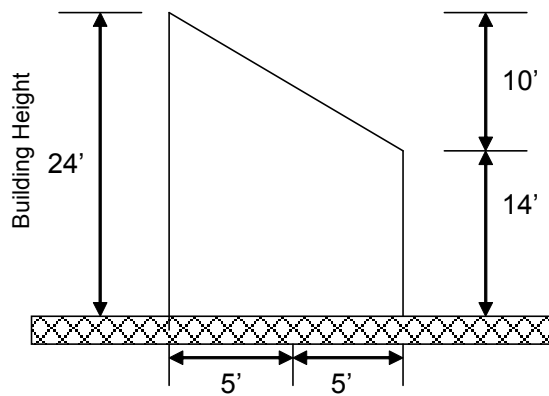

GABLE ROOF

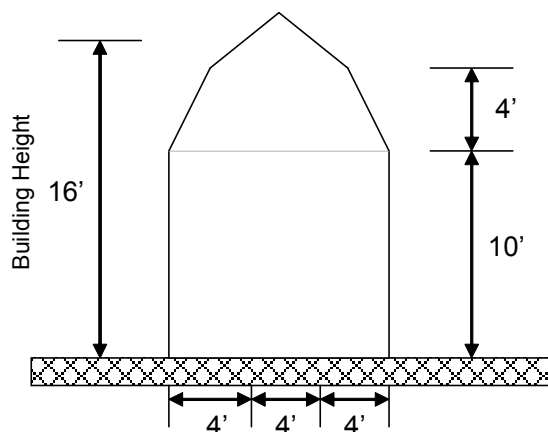

This diagram is illustrative only and is not part of the zoning ordinance.

The height is measured from grade to the average height of the roof.

The building height is 24 feet

When the top gable has a rafter slope steeper than 1 in 12, gambrel roofs are considered double gable roofs, i.e., one gable on top of another. The height in such cases is measured to the average height of the top gable.

This diagram is illustrative only
and is not part of the zoning
ordinance.

ATTIC STORY

Attic story shall mean any story situated wholly or partially in the roof
so designed, arranged, or built as to be used for business, storage, or
habitation.
